- Put Google Spreadsheet data through a workflow
- Send tasks and notifications to Gmail
- Build forms and plug them as gadgets in iGoogle

Full Overview

The collaboration and messaging tools that come with the suite of Google Apps help to make teamwork more effective. Tools such as Gmail and Google Calendar keep team members in touch and communicating, while Google Docs makes the sharing and use of information more efficient.

Google has provided all of the tools you need to address the unstructured collaboration that is so much a part of every day office work. But what about the many structured aspects of your work place, such as filling expense claims, recording timesheets, obtaining leave approval, responding to tenders, and so on? How would you get what you need done quickly and efficiently?

Cordys Process Factory helps users of Google Apps to build and run process flows in the cloud. Google users can use Cordys Process Factory to build situational applications on-demand, so that they can track and monitor activities that comply with the demands of the corporation more consistently and cost effectively.

- Cordys Process Factory and Google Spreadsheets: Put any Google Spreadsheet Template through a workflow.

- Gadgets for Workflow Tasks: Build Forms to complete specific tasks and plug them as gadgets in your Google Apps Start Page or Google Site.

- Cordys Process Factory and Gmail: Send tasks and notification messages to employees and business partners via Gmail within the workflow.

Office in the cloud has now become a reality with the combined offering of Google Apps and Cordys Process Factory.
